CONGRATULATIONS!

If you are reading this, it means that you have made the wise decision to cover a WNBA game featuring the defending WNBA Champion Las Vegas Aces. Odds are, you a member of one of the most prestigious media outlets in the nation, and a talented print, radio or television personality.

Regardless of how these Game Notes came into your possession, welcome to year 6 of the Las Vegas Aces—our first as the defending WNBA Champs.

These Game Notes are designed to simplify your coverage of the Aces, but in a society that now likes to communicate in 140 280-characters or less, 30-second Tik Tok videos, even a modest-sized set of Game Notes like this one can be intimidating.

Over the rest of this page, we will walk you through the complexities of this document to further enhance your ability to cover the most entertaining team in the WNBA.

Before we begin, we want you to know that we've gone interactive with notes this year. Embedded links will take you to the <u>interweb page</u> that contains more information on each note or tidbit of information. Click through to your heart's content!

So let's get started. These notes are divided into 3 primary sections: Season Notes, Individual Player Profiles and Statistics.

Statistics

Let's take these items in reverse order. If all you need are our season statistics, just flip to the end of these notes. Both team's stats are always located on the second to last page.

There is also a separate statistical packet in a different document with more detailed information about both teams.

The back page is the Media Cheat Sheet roster, complete with head shots to help you quickly identify our players.

What about box scores? Some folks like to see the box score from the previous games in Game Notes, while some folks like to peruse all of that season's box scores. Some like to see the box scores from previous meetings between the two teams playing today.

Given all these possibilities, with the exception of 2023 games between the two teams playing today, we have decided not to include any box scores because we are lazy in an effort to rid the planet of unnecessary paper waste. All WNBA box scores (PDFs) are located online and can be downloaded here.

Additional Notes

Notes you've seen plenty of times, are still important, but not enough to take up prime real estate in the front of the game notes.

Individual Player Profiles

Each player on the roster has at least one page of info in this doc.

Included in these are ...

- · Notes from the 2023 season
- · Notes from previous seasons
- Streaks that paint a statistical picture of the player's most recent efforts.
- · Single-season and career highs.
- Career Stats
- · Links to a more robust bio online

Additional information is available on each player's online biography, linked from various spots in the notes, including the front page, but these should give you what you need to cover the game.

Season Notes

This area is divided into 3 primary sections.

As the season progresses, the first notes will be super specific to this year's team and players, and should tell the story of the season, essentially answering the question, "Why do the Aces have the record they have?"

The second section contains interesting milestones or tidbits about this year's team or individuals.

The third section includes information from recent seasons that might (in theory) still have relevance to this year's team.

Today's Opponent

These pages let you know how the Aces have performed historically against today's opponent (pages 4-5)

Additional Information

Also included in these notes are an Aces' roster, and Pronunciation Guide (page 3).

Frequently Asked Question

"I have found several typos in this document. Would you like to know about them?"

Yes, we would, but you should know that there are many people in the world who are not happy unless they find fault in the work of others. In an effort to boost their self-confidence, we have intentionally sprinkled several tpyos in this document to assist them, so we may already be aware of the typos of which you speak.

Epilogue

If you have any additional questions, please don't hesitate to reach out to the following people:

Director of Media Relations John Maxwell (951) 203-3208 jmaxwell@lasvegasaces.com

Assistant Director of Media Relations Caroline Williams (725) 289-8896 cwilliams@lasvegasaces.com

Thanks again for your interest in covering the Las Vegas Aces.

NEVER BEEN BETTER

The Aces Big 4 of Chelsea Gray, Kelsey Plum, A'ja Wilson and Jackie Young are firing off career-high seasons in various categories.

Gray, who is dishing out a franchise-high 7.2 assists, is posting career-highs of 15.0 points and 4.0 rebounds per game.

Plum's shooting from the field overall (.476) and from 2-point range (.547) are her best shooting performances since joining the league in 2017.

Wilson is currently posting career-highs of 21.9 ppg, 9.5 rpg, 2.17 bpg, 54.0 percent shooting from the field and 55.5 from 2-point range.

Young has increased her scoring to 18.2 points a game on careerbests of 53 percent from the field overall, 57.8 percent from 2-point range and a league-high 46.1 percent from 3-point.

SHOOTING OFF FIREWORKS

The Aces continue to post league-bests of 48.4% shooting from the field, 37.6% from 3-point range and 83.8% from the line. No team has ever finished the season leading in all 3 categories.

L'CHAIM

A'ia Wilson (21.9), Kelsev Plum (18.7) and Jackie Young (18.2) are vying to become the first trio of W teammates to average 18 or more points per game in the same season.

CRIBBAGE CHAMPIONS

Las Vegas' win over Chicago on Aug. 24 was its 30th of the season, passing the 2014 Phoenix Mercury (29-5) for the most wins in a WNBA season.

Most Wins in WNBA History

Team	Year	W	L	Pct
Las Vegas	2023	30	6	.833
Phoenix	2014	29	5	.853
Los Angeles	2000	28	4	.875
Los Angeles	2001	28	4	.875
Seattle	2010	28	6	.824
Minnesota	2016	28	6	.824

KNOCKING AT THE DOORSTEP OF HISTORY

The 2023 Aces, who have won a WNBA record 23 games by 10 or more points, have their sights set on a number of other WNBA records this season. Here are just a few:

Record	2023 Aces	Current Holder
Scoring Differential	+12.0	+12.8 (Houston, 2000)
Wins by 10+ Points	23	23 (Las Vegas, 2023)
Wins by 20+ Points	12	13 (Washington, 2019)
Wins by 30+ Points	3	4 (Los Angeles, 2013)
Points Per Game	92.6	93.9 (Phoenix, 2010)
Field Goal Percentage	.484	.491 (Chicago, 2020)
2-Point Field Goal Percentage	.543	.557 (Chicago, 2020)
Offensive Efficiency Rating	112.3	112.9 (Washington, 2019)

7.22 SHADES OF GRAY

After recording the 2nd- and 3rd-best passing seasons in franchise history over the previous 2 years, Chelsea Gray has placed herself in a good position to take the top spot.

Player	Year	APG
Chelsea Gray	2023	7.22
Danielle Robinson	2013	6.72
Chelsea Gray	2022	6.06
Chelsea Gray	2021	5.91
Becky Hammon	2011	5.82

MOST IMPROVED, IMPROVED

Jackie Young, the 2022 WNBA Most Improved Player, has made a marked improvement again in 2023. She's averaging a career-high 18.2 points a game and shooting more accuratly than in any previous season in her 5-year career, while seeing a slight dip in playing time.

Season	MIN	FG%	3P%	eFG%	FT%	PTS
2023	31.6	.530	.461	.624	.863	18.2
2022	33.2	.476	.431	.539	.859	15.9

TOP OF THE PECKING OERDER

Seven teams in WNBA history have boasted both the best offense and defense in the same season as measured by <u>Offensive (OER)</u> and <u>Defensive Efficiency Ratings</u> (DER)—points scored and allowed per 100 possessions—and 6 of them have won the title (*). The Aces have their sights set on becoming the 8th, currently ranking first for both OER and DER.

Team	Year	OER	DER
Houston *	1998	104.1	86.7
Houston *	1999	104.4	91.4
Houston *	2000	109.1	90.8
Phoenix *	2014	106.4	94.1
Minnesota	2016	107.4	96.6
Minnesota *	2017	108.5	94.4
Seattle *	2020	108.3	93.3
Las Vegas	2023	112.3	97.8

POINT GAWD OR SHOOTING GAWD?

In the 60 games she's played since the 2022 All-Star Break, including the 2022 postseason, the 2022 WNBA Finals MVP is averaging 16.3 points and 7.0 assists, while connecting on 52.6% from the field, 44.3% from 3-point range, and 89.5% from the free throw line.

For context, in the 21 games played prior to the 2022 midseason break, Gray averaged 12.4 points, 6.0 assists and shot 45.5% from the field, 29.1% from 3-point and 91.3% from the line.

Only 4 players in WNBA history have averaged more than 16.0 points and 6.0 assists over a full season. None came as close to shooting as well as Gray has over the 59 games since the 2022 All-Star Break.

	YEAR	PPG	APG	FG%	3 G %	FT%
Chelsea Gray	2022 pre-AS	12.4	6.0	45.5	29.1	91.3
Chelsea Gray	Post 2022 AS	16.3	7.0	52.6	44.3	89.5
Diana Taurasi	2013	20.3	6.2	45.6	34.6	85.4
Candace Parke	er 2015	19.4	6.3	48.9	27.9	81.5
Diggins-Smith	2018	17.9	6.2	40.3	29.7	83.9
Sabrina Ionesc	u 2022	17.4	6.3	41.1	33.3	93.1

CENTURY 2023

The Aces scored 100 or more points in 7 games in 2021 and 2022, and upped that to 9 times this year. The WNBA record for most times reaching the century mark in a season is 10 by the 2010 Phoenix Mercury.

	Year	Team	100+ Pt Gm
1.	2010	Phoenix	10
2.	2009	Phoenix	9
	2023	Las Vegas	9
3.	2007	Phoenix	8
4.	2021	Las Vegas	7
	2022	Las Vegas	7

SILENT BUT DEADLY ASSASSIN

Jackie Young may be quiet off the court, but she is a deadly assassin on it. She is connecting on a league-best 46.07 percent of her 3-pointers on the year, and is taking a run at the top 5 in WNBA history for highest 3-point percentage when attempting at least 150 from distance. The record is 45.28 percent set by Maya Moore in 2023, but Young is in good shape to claim that title.

WNBA All-Time Single-Season 3-Point % (Minimum 150 Attempts)

Player	Year	Team	3PM	3PA	3P%
Jackie Young	2023	Aces	82	178	.461
Maya Moore	2013	Lynx	72	159	.453
Sabrina Ionescu	2023	New York	119	265	.449
Sue Bird	2016	Storm	72	162	.444
Allie Quigley	2019	Chicago	80	181	.442

One year ago, Kelsey Plum set the mark for highest 3-point field goal percentage by a player taking at least 200 attempts, which Young should pass if she reaches 200 3-point attempts this year.

WNBA All-Time Single-Season 3-Point % (Minimum 200 Attempts)

Player	Year	Team	3PM	3PA	3P%
Sabrina Ionescu	2023	Liberty	119	265	.449
Kelsey Plum	2022	Aces	113	269	.420
Sugar Rodgers	2016	Liberty	86	208	.413
Diana Taurasi	2006	Mercury	121	305	.397
Diana Taurasi	2011	Mercury	81	205	.395
~~~					
Jackie Young	2023	Aces	82	178	.461

Since the start of the 2022 season, <u>Young ranks 1st and Kelsey</u> Plum lists 2nd in 3-point field goal percentage among players with a minimum of 100 made 3-pointers.

	Player	3PM	3PA	<u>3P%</u>
1.	Jackie Young	132	294	44.90
2.	Kelsey Plum	198	486	40.74
3.	Marine Johannes	104	257	40.47

## THAT'S OFFENSIVE

The Aces have had one of the best offenses in the W since making the move to Vegas. In 2020 they ranked 2nd in the WNBA in Offensive Efficiency, and in each of the past two years they finished 1st.

Year	OER	Rank
2018	102.0	6th out of 12
2019	99.1	5th out of 12
2020	107.3	2nd out of 12
2021	107.1	1st out of 12
2022	109.6	1st out of 12
2023	112.3	1st out of 12

## **BOOM! BOOM! OUT GO THE LIGHTS!**

The Aces, who are shooting a league-high 48.4% from the field, own 4 of the top 10 single-game field goal percentages in the league this year, including a season-high 59.7% against the Lynx on July 9.

### **NOTHIN' BUT NET**

The Aces are threatening the league record for 2-point field goal percentage in a season this year.

Team	Year	<u>2PT%</u>
Chicago	2020	55.66
Las Vegas	2023	54.29
Chicago	2022	54.23

#### ALL ABOUT THAT PACE

The Aces have played at one of the fastest paces in the league since moving to Las Vegas as measured by possessions per 40 minutes.

	2018	2019	2020	2021	2022	2023
Pos/40	82.4	82.3	82.6	82.5	82.2	82.40
Rank	1st	2nd	1st	1st	1st	2nd

#### **TYING A LLEGEND**

A'ja Wilson scored 35 points against Minnesota on July 22 and her 82.4% (14-17 FGs) shooting from the field tied the mark for highest single-game field goal percentage for a W player attempting at least 17 field goals (Lisa Leslie, Aug. 1, 2002, 14-17 FGs).

#### **BLOCK PARTY**

A'ja Wilson, who ranks No. 21 on the league's all-time career blocked shot list and 6th among active players, has blocked more shots than anyone else since entering the league in 2018.

### Top 3 WNBA Shot Blockers Since 2018

Name	Blocks
1. A'ja Wilson	332
2. Brittney Griner	275
3. Elizabeth Williams	260

### **TRIPLE A**

A'ja Wilson established the fanchise record for scoring average in a season as a rookie, and she is taking another run at it this year. She could also become the only player in franchise history to average 20 or more points in a season on 3 occasions.

Player	Year	PPG
1. A'ja Wilson	2023	21.94
2. A'ja Wilson	2018	20.67
3. A'ja Wilson	2020	20.45
4. Kelsey Plum	2022	20.17
5. A'ja Wilson	2022	19.53

### LOOK AT ALL THE PEOPLE HERE TONIGHT

The Las Vegas Aces welcomed 10,348 fans to their Aug. 19 game against the Sparks—a franchise record since the team made the move to the Sports & Entertainment Capitol of the World prior to the 2018 season. Twelve of the top 13 attendance figures during the team's time in Las Vegas have come in the past 2 seasons, 5 of the top 6 are from this season, and they lead the W in attendance this year.

Date	Opponent	Attendance
Aug. 19, 2023	Los Angeles	10,348
July 11, 2023	Phoenix	10,281
July 30, 2023	Dallas	10,213
Sept. 13, 2022	Connecticut *	10,211
May 27, 2023	Los Angeles	10,191
July 5, 2023	Dallas	10,177

^{*} Playoff Game

## **JUST WIN, BABY!**

The Aces have won more regular season games than any other WNBA team since the start of the 2019 season.

Team	Wins
Las Vegas	119
Connecticut	108

Las Vegas has also averaged the most points per game over that same time span ...

Team	PPG
Las Vegas	88.69
Chicago	84.14
Connecticut	82.16

... and has the highest field goal percentage ...

Team FG% Las Vegas 46.28 Chicago 45.76 44.91 Minnesota

... and the highest 3-point field goal percentage ...

Team	3FG%
Las Vegas	36.89
Seattle	36.07
Connecticut	34.96

#### **GONE STREAKING ...**

Kierstan Bell—After scoring 2 or more points a game, over a 15-game span, averaging 5.1 ppg and shooting 36.6% from the field, has not scored in the last 3 games...Scored a career-high 15 points vs. Atlanta on Aug. 1 after scoring a total of 15 over her previous 5 games ... Went 3 for 6 from 3-point range vs. Atlanta on August 1 after making 3 of her previous 17 ... Has made 20 3-pointers in 2023 after making 3 during the entire 2022 campaign.

Alysha Clark—Missed the game against Atlanta on Aug. 13 (back)... Has averaged 4.2 rebounds per game in last 17 games compared to 2.6 in her previous 10...Made 3 of 5 field goal attempts on Aug. 28 against New York after going 3 of 16 in previous 3 games.

**Alaina Coates**—Averaged 1.3 points and 1.1 rebounds in her 7 games for the Aces after 1.0 points and 0.0 rebounds in 2 games for Phoenix in 2023.

**Sydney Colson**—Has dished out at least 1 assist in 11 of her last 15 games ... Made 3 of 4 from distance in last 2 games after not hitting a 3-pointer in her previous 10 games.

**Cayla George—**Averaged 4.5 points over her first 4 games, 1.3 points per game over the next 17 games, and 3.9 ppg over her last 7 games ... Prior to going 8 of 19 (.421) from 3-point over the past 8 games, was 1 for her last 25 from 3-point range over a 16-game span ... Grabbed at least 1 rebound (1.9 rpg) in 17 of her last 19 games.

Chelsea Gray—Registered the franchise's first points-rebounds-assists triple-double with 22 points, 11 assists and a career-high 11 rebounds against New York on Aug. 17 ... Has 9 double-doubles on the season, including 4 in the last 8 games ... Got her first 4 double-doubles over the first 20 games of the year and last 5 came in the last 14 games ... Went 9 of 12 from the free throw line on Aug. 28 after going 15 for 16 from the line over her previous 10 games... Averaged 6.5 apg pre-All-Star and 8.2 apg in the 15 games since... Also upped her rebounding from pre-All-Star to post, 3.5 rpg to 4.7 rpg

**Candace Parker**—Injured (left foot surgery) and has not played since the July 7 loss at Dallas.

Kelsey Plum—Averaged 4.8 apg in last 9 games ... Prior to shooting 28.6 percent from 3-point in the Aug. 19 loss to LA, had shot 48.8 percent over the previous 7 games ... Has made at least 1 3-pointer in 29-straight games, which is the longest active streak in the league ... Has 14 games of 20 or more points over her last 25 games after reaching that mark just once in her first 10 games... Prior to going 1 of 5 from distance in the Aug. 28 loss to New York, had made at least 2 (3.1 per game) 3-pointers in each of her previous 11 games, which was the longest such active streak in the league...Has been near-perfect from the line over the past 14 games, shooting 96.1% (49-51 FTs) at the charity stripe.

**Kiah Stokes**—Grabbed a career-high tying 17 rebounds at Chicago on July 25 and grabbed double-digit rebounds twice more in the 6 games after that ... Averaged 6.9 rpg over last 13 games compared to 4.9 rpg over the previous 10 ... averaged 5.4 rpg prior to All-Star and 6.5 rpg in the 15 games since the midseason break.

A'ja Wilson—Since scoring 9 points on 2 of 14 shooting from the field in the Aug. 6 loss at New York, averaged 27.0 ppg and 9.8 rpg, while connecting on 55.4% from the field and 87.9% from the line in the 9 games since ... Has at least 2 blocked shots in 24 of 36 games and averaged 3.0 bpg over last 4 contests ... Since the All-Star break, increased production from pre-All-Star in scoring (19.7 to 25.1), rebounds (9.3 to 9.7) and free throw percentage (.770 to .857) ... Has played in 134 consecutive games, which is the longest active streak in the W ... Scored at least 20 points in 25 of 36 games and 7 of her last 9... Has 20 double-doubles, which ranks tied for 6th among all-time W single-season leaders, and tied for 2nd among active double-double leaders.

Jackie Young—Has made at least 1 3-pointer in 27-straight games, which is the 2nd longest active streak in the league ...Had scored in double figures in every game this season prior to scoring 9 points vs Dallas on July 30, and is averaging 17.2 points per game in the 11 games since ... Shot 79.7% from the line in her first 21 games and made 94.7% (53 of 56) over the last 15 games, including a perfect 23 for 23 in the last 6 games...Dished out 4.2 apg over last 9 games after passing off for just 1 in each of the previous 2.

Aces Offense—Scored 90+ points in 24 games this year, including 9 games of 100 or more points ... Scoring differential through the first 36 games (+12.0) is the largest scoring differential over that span by any team in WNBA history...The Aces hit a perfect 18 of 18 from the line against Chicago on Aug. 24, and shot 91.2% from the charity stripe over the next 5 games after hitting 85.2% over the previous 9.

## IF A T(H)REE FALLS IN THE WOODS ...

Although the Aces have been one of the best 3-point shooting teams over the past 5 years, it wasn't always a big part of their arsenal. In 2022, the Aces began utilizing the 3-pointer to a much greater degree, more than doubling their average made and attempted 3s from 2018.

3PFG% Rank	<b>2018</b> 34.6 7th	<b>2019</b> 36.7 1st	<b>2020</b> 36.6 4th	<b>2021</b> 37.5 2nd	<b>2022</b> 36.1 2nd	2023 37.6 1st

## **SLIDE OVER COACH**

Entering 2022, Becky Hammon owned 5 of the top 6 slots on the Aces franchise leader board for made 3s in a season. Kelsey Plum topped that mark in the 26th game of the year last season. This year Plum and Jackie Young have moved 3 of Hammon's record years out of the top 6.

Year	Team	3PM
2022	LV	113
2023	LV	85
2023	LV	82
2012	SA	80
2008	SA	77
	2022 2023 2023 2012	2022 LV 2023 LV 2023 LV 2012 SA

#### ONE GOOD TURNOVER DESERVES ANOTHER

The Aces took care of the basketball better than almost anybody in the WNBA in each of the past 3 seasons, finishing 0.1 behind Dallas in 2020. They led in fewest turnovers in 2021 and 2022, and are the tops in the league again this season.

### **Turnovers Per Game**

	2020	2021	2022	2023
Las Vegas	12.5	11.8	11.7	12.0
Rank	2nd	1st	1st	1st

In looking at turnover percentage, which is the percentage of a team's possessions that end in a turnover, the Aces in 2021 and 2022 took better care of the ball in each possession better than any team in WNBA history, and lead the W in turnover percentage again this year.

## **WNBA All-Time Turnover Percentage Leaders**

Year	TO%
2021	14.1
2022	14.1
2023	14.5
	2021 2022

4. Atlanta 2021 14.8 RAREFIED AIR

Only 11 players in the history of the league have each produced 40 or more games with 20+ points and 10+ rebounds. Of those 11, 5 are active and 2 feature on this year's Aces squad—Candace Parker (2nd) and A'ja Wilson (5th).

	Player	20P/10R Dub-Dubs	Career Games	% of Games
1.	Tina Charles	99	391	25.3
2.	Candace Parker	84	410	20.4
3.	Sylvia Fowles	82	408	20.1
4.	Lisa Leslie	77	363	21.2
5.	A'ja Wilson	58	185	31.4
6.	Tamika Catchings	56	457	12.3

#### STARTER KIT

The Aces starters set a WNBA record in 2022 by scoring more points than any starting five in league history. Las Vegas is on pace to break that mark again in 2023.

Team	Year	PPG
1. Las Vegas	2023	79.3
2. Las Vegas	2022	77.5
3. Phoenix	2007	75.1

## **LOW ON RESERVES**

Las Vegas' bench averaged a league-record 35.0 points per game in 2020. Only 7 other teams in WNBA history have averaged more than 30 points per game from their reserves. Two years later, in the Aces' championship season, the bench averaged 12.9 points—12th in the league. This year, Las Vegas' reserves are averaging 13.3 points per game (fewest in the league).

#### ALL SHE DOES IS WIN, WIN, WIN

When Jackie Young turned 25 last September 16, she had 87 regular season wins to her credit—one off the record for most wins prior to turning 25 held by Lynx legend Maya Moore (88).

Mwadi Mabika held the league mark for wins through her 26th birthday until Jackie Young, at 25 years, 329 days, passed Mabika on Aug. 11, and now owns the record outright. Moore owns the No. 1 slot for wins before turning 27 with 136, something for Young to shoot for in 2024.

## Player Wins Before 26th Birthday

Jackie Young
 Mwadi Mabika
 Musadi Mabika

Sonny Allen	46	30	.605

### FAST 50

No, not another Fast & The Furious sequel. Becky Hammon became the 2nd fastest coach in WNBA history to reach 50 wins when the Aces upended the Atlanta Dream, 98-81, on August 2. It was Hammon's 62nd game as a head coach in the league. Michael Cooper tops the list with 50 wins in his 1st 57 games on the sidelines.

Coach	Gm
Michael Cooper	57
Becky Hammon	62
Van Chancellor	63

#### **HEIR B&B (BOARDS & BLOCKS)**

A'ja Wilson, who secured her 1,500th career rebound this season, is currently 2nd in the league in rebounding (9.5 rpg) and leads the W in blocked shots (2.2 bpg).

Should she lead the league in both categories, she would become just the 3rd player in WNBA history to do so (Lisa Leslie, 2004 and Candace Parker, 2009).

Only one other player in franchise history has led the WNBA in rebounding (Natalie Williams, 2000).

Only 2 players in WNBA history have led the league in blocked shots 3 or more times (Margo Dydek, 8; Brittney Griner, 8). Should Wilson lead the league in 2023, it would be the 3rd time she has done so.

#### A'JA THE LOVE BUG

A'ja Wilson poured in a <u>WNBA record-tying 53 points</u> in the Aces 112-100 victory over Atlanta on Aug. 22. The 53-point outburst also <u>set a new franchise scoring standard</u>—just 11 days after tying the previous franchise-high of 40 points set initially by Kelsey Plum on July 9.

#### Top 3 WNBA Single-Game Scoring Leaders

Player	PTS	Date	Team	OPP
A'ja Wilson	53	8/22/23	Aces	Dream
Liz Cambage	53	7/17/18	Wings	Liberty
Riguna Williams	51	9/8/13	Shock	Silver Stars

### Top 5 Franchise Single-Game Scoring Leaders

Player	PTS	Date	OPP
A'ja Wilson	53	8/22/23	Dream
A'ja Wilson	40	8/11/23	Mystics
Kelsey Plum	40	7/9/23	Lynx
Danielle Adams	39	9/15/13	Dream
A'ja Wilson	39	6/29/19	Fever

### **50+ MONEY LINE**

In scoring 53 points (16-23 FGs, 1-1 3FGs, 20-21 FTs), A'ja Wilson:

- Scored 20 or more points for a league-best 24th time this season, and the 98th time in her career. She now ranks 19th in WNBA history for most career 20+ point games, behind Brittney Griner in 18th place with 104.
- Scored 30 or more points for the <u>10th time in her career</u>, tying her with Becky Hammon for most 30+ point games in franchise history.
- Scored at least 40 points in a game twice this season, making her the 7th player in WNBA history to score 40 or more points in a game twice in the same year.
- Made 20 free throws, <u>marking the second-most free throws ever</u> made in a WNBA game (22, Cynthia Cooper)
- Set the franchise single-season scoring record (735-as of Aug. 22), passing Kelsey Plum's 726 points scored in 2022.

## **LAYING POINTS**

Only 21 players in WNBA history scored 40 or more points in a single game (as of Aug. 30), with a total of <u>38 40+ point games overall</u> and <u>33 in the regular season</u>). Kelsey Plum (at Minnesota, July 9) and A'ja Wilson (vs. Washington, Aug. 11) are 2 of them, having scored 40 points apiece in games this season. Wilson followed her 40-point game up with a 53-point outburst against Atlanta on Aug. 22.

Plum and Wilson became the <u>first pair of teammates in league history to accomplish the feat</u> in the same season. Only one franchise in W history has seen 3 different players score 40 or more, but not in the same season (Los Angeles: Kristi Toliver, 43, 2015; Lisa Leslie, 41, 2006; Candace Parker, 40, 2008).

#### **TRIPLE CROWN**

Chelsea Gray made history with the first points-rebounds-assist game in franchise history when she recorded 22 points, a career-best 11 rebounds and 11 assists against New York on Aug. 17. It was the franchise's 2nd triple-double—Margo Dydek had 12 points, 11 rebounds and 10 blocked shots against the Orlando Miracle on June 7, 2001.

Gray's triple-double was the second of her career (13 points, 10 rebounds, 13 assists; July 7, 2019 vs. Washington). It also was the 30th in league history and 10th in the W this season through Aug. 30.

#### PERFECT 10s

Against the Mystics on Aug. 11, Chelsea Gray and Kelsey Plum became just the second set of teammates in WNBA history to hand out 10 or more assists in the same game, and the first to do so in regulation time. The first set of teammates was ... well dang ... Gray again, only this time with Odyssey Sims in 2017 in a double overtime game with the Los Angeles Sparks.

Player	Asts	Player	Asts	Team	Орр	Date
Chelsea Gray	10	Kelsey Plum	10	LV	WAS	Aug. 11, 2023
Chelsea Gray	10	Odyssey Sims	10	LA	CHI	Aug. 18, 2017 (2 OT)

## **TESTING, TESTING, 1, 2 .... 3?**

In scoring a then-career-high 40 points (17-25 FGs, 0-1 3PTs, 6-7 FTs) against Washington on Aug. 11, A'ja Wilson not only tied the franchise record set by Kelsey Plum earlier this season, she also broke her own <u>WNBA record for most points scored in a game without hitting a 3-pointer.</u>

Also, Wilson's 17 made field goals are the second most in a game in WNBA history and the most in franchise history (18, Lauren Jackson, Seattle at Washington, July 24, 2007). Her 17 made 2-pointers tied Lauren Jackson's WNBA record for most made 2s in a game (Seattle vs. Los Angeles, Aug. 6, 2003).

#### **ALL RIGHT NOW**

A'ja Wilson has made a living at the free throw line, leading the league in attempts in each of her first 3 seasons in the league, while finishing 2nd in 2021 and 3rd in 2022. She currently is ranked No. 1 this year.

	2018	2019	2020	2021	2022	<b>2023</b>				
FTA/G	7.5	5.5	6.8	6.2	5.2	7.2				
Since the start of the 2018 season, Wilson has taken more than 300										
more free throws than her nearest competitor.										

Player FTAs Since 2018
A'ja Wilson 1183

Breanna Stewart 845 DeWanna Bonner 833

### A'JA WILSON, FUTURE ACES GM?

A'ja Wilson <u>broke the franchise record</u> for most double-doubles in a career in the final game of the 2022 season, passing current Aces GM Natalie Williams.

Player	2B-2B
A'ja Wilson	74
Natalie Williams	53
Margo Dydek	41

Since being drafted (2018-2023), Wilson has secured the most double-doubles in the league.

Player	2B-2B Since 2018
1. A'ja Wilson	74
2. Sylvia Fowles	66
3. Jonquel Jones	57
4. Alyssa Thomas	56

### R-E, R-E-B, R-E-B-O-U-N-D, RE-BOUND

Over the previous 4 seasons, the Aces recorded the 4 highest defensive rebounds per game averages in WNBA history. The 2023 Aces and Liberty are currently sitting among the top 5.

	Year	Team	DRPG
1.	2021	Las Vegas	31.28
2.	2019	Las Vegas	29.62
3.	2023	New York	29.60
4.	2020	Las Vegas	29.27
5.	2023	Las Vegas	28.67
6.	2022	Las Vegas	28.42

The Aces hold the top 2 marks for most defensive rebounds in a regulation game in WNBA history, with 44 at Seattle on May 20, 2023, and 43 at Los Angeles on July 1, 2022.

### **ALL DRIED UP**

The Aces defensive effort held Dallas scoreless until the 4:25 mark in the first quarter of their Aug. 8 game, marking the longest scoring drought of any W team this season to open a game (Chicago, 4:41, vs Los Angeles, June 4).

#### **TIPPING BACK 40S**

In scoring 40 points against the Lynx on July 9, Kelsey Plum not only upped the franchise scoring standard, since eclipsed by A'ja Wilson, but after making 77.78% (14-18 FGs) of her attempts, she also set the bar for all-time WNBA single-game shooting percentage when scoring 40 or more points, bypassing the 77.27% shot by Liz Cambage when she set the WNBA single-game scoring mark of 53 points.

Top 5 WNBA All-Time Single-Game Field Goal Percentages, 40+ Points

Player	FGs	FG%	PTS	Date	OPP
Kelsey Plum	14-18	77.78	40	7/9/23	Lynx

Rhyne Howard	14-20	70.00	43	7/2/23	Sparks

### **ACES THEME NIGHTS**

Throughout the season the Las Vegas Aces are celebrating fans of all ages and backgrounds in a variety of ways.

On May 27 members of the 2022 WNBA Championship team received their rings and the championship banner was unfurled from the roof. The next day the first 7,500 fans were given a replica banner to commemorate the Aces first WNBA title.

But that was just the beginning.

June 11 was Kids Day, on June 15 the Aces celebrated Pride Month, June 26 was Bobblehead Night, featuring giveaways of limited-edition 2022 WNBA Finals MVP Chelsea Gray bobbleheads, July 5 honored members of the military, first responders and all local heroes on Heroes of the House Night and July 11 was Sneakerhead Night.

Breast Health Awareness Night was Aug. 1 and featured moments throughout the game that paid tribute to survivors and honored lives lost. The Aces helped raise funds benefitting the Kay Yow Cancer Fund via the "Shooting for a Cure" Pledglt Campaign.

On Aug. 19 the franchise celebrated its history by bringing approximately 50 alumni to Las Vegas for a weekend of basketball and memories. The alumni were honored on the court at halftime and signed autographs after the game. (See page 40 for the list of alumni in attendance.)

## Sept. 10 vs. Phoenix: Fan Appreciation Day

The Aces will celebrate and show appreciation to their loyal and dedicated fanbase! All fans in attendance will receive an exclusive team poster, and the Aces will thank the fans with in-game giveaways, contests and 40% off at in-arena retail locations.

## **APPROACHING RECORDS & MILESTONES**

On Aug. 22 in Atlanta, A'ja Wilson upped the franshise scoring record to 53 points and took over the franchise single-season scoring mar. She is on the verge of leapfrogging to the top of numerous other franchise single-season records, including rebounds, double-doubles, defensive rebounds, field goals made and 2-point field goals made. Wilson also is nearing the all-time franchise record for free throws made, while she and Chelsea Gray, who now owns the franshise single-season assists mark, are vying to overtake Natalie Williams for career field goal percentage.

## **HEAD COACH BECKY HAMMON**

Las Vegas Aces President Nikki Fargas announced on December 31, 2021 that the team hired San Antonio Spurs assistant, and 6-time WNBA All-Star Becky Hammon as the team's head coach. Hammon rewarded the Aces less than nine months later with the fanchise's first WNBA Championship.

The seeds for Hammon's hiring were originally sewn when the Aces retired her jersey on September 13, 2021. That ceremony served as the culmination of the franchise's 25th anniversary alumni initiative, which saw the Aces embrace their Utah and San Antonio roots, and celebrate the players who helped build the franchise and the league from the ground up. Las Vegas owner Mark Davis spent time with Hammon and her family that week, and walked away understandably impressed.

Hammon played 16 seasons in the WNBA, including her final eight in San Antonio, where she led the franchise to its first finals appearance in 2008.

On August 5, 2014, Spurs head coach Gregg Popovich hired Hammon as a full-time assistant making her the first woman in NBA history to hold that position.

Since that time, Hammon has continued to accumulate coaching 'firsts' in the NBA. On July 3, 2015, she became the first woman to serve as head coach in the NBA's Summer League where she led the Spurs to the league title.

Less than a year later, Hammon became the first woman to be part of an All-Star coaching staff, and on December 30, 2020, following Popovich's ejection in San Antonio's game against Los Angeles, Hammon took over on the bench, becoming the first woman acting head coach in the history of the NBA.

A member of the league's 15th, 20th and 25th anniversary teams, Hammon went undrafted in 1999 following her All-American career at Colorado State. She signed with New York as a free agent that same year, helping the team to WNBA Finals appearances in three of her first four years in the Big Apple.

The Rapid City, South Dakota native earned her first All-Star nod in 2003, and represented New York on the Eastern Conference squad in 2005 and 2006 as well.

Following the 2006 season, New York traded Hammon to San Antonio. In her first year in silver and black, she posted what were then career highs in scoring (18.8 ppg), and assists (5.0) while earning another trip to the WNBA All-Star Game. As a team, the Silver Stars made their first appearance in the postseason since 2002, falling to Phoenix in the Western Conference Finals.

In 2008, Hammon led San Antonio to its first trip to the WNBA Finals where they fell to Detroit. The Silver Stars made the playoffs in each of her seven full seasons with the team, and Hammon once again was named to the All-Star team in 2009 and 2011.

She retired as the franchise leader in assists per game (5.1) and scoring average (15.6), and the WNBA leader in career free throw percentage (89.7).

Hammon, who was inducted into the Naismith Memorial Hall of Fame on Aug. 12, 2023, was inducted into the Colorado Sports Hall of Fame in 2015 and the San Antonio Sports Hall of Fame in 2018.

## **SYDNEY COLSON**

#51

Guard 5-11 Texas A&M '11

9th Year

## 2023 (Las Vegas)

• ...

## 2022 (Las Vegas)

 Her 5 assists at Phoenix on May 6 were her most since she dished out 6 vs. Atlanta on August 16, 2020

## 2019 (Las Vegas)

 Forced the pass in the 2nd round of the WNBA Playoffs which led to the 'Hamby Heave' and a trip to the WNBA Semifinals for the Aces

## Collegiate Honors & Notes (Texas A&M)

 Finished her career ranked 5th all-time at A&M in assists and 4th in steals ... Posted 3-straight 100-assist seasons ... Led Aggies to the 2011 NCAA National Championship, and was named All-Big 12 honorable mention as a senior

### Personal

 Majored in sociology at Texas A&M ... Would like to pursue a television career as a sports commentator after WNBA career ... Takes acting classes, and has spent time as a stand up comic (<u>watch her recent set</u> from Brad Garrett's Comedy Club at MGM Grand)

## **KELSEY PLUM**

#10

Guard 5-8 Washington '17

6th Year

## WNBA Career Highlights

- 2022 WNBA Champion
- · 2023 & 2022 All-Star
- 2022 All-Star MVP
- · 2021 6th Player of the Year
- 1-time Western Conference Player of the Month (Sept. 2021)
- 3-time Western Conference Player of the Week (2 times in 2022, 1 time in 2021)

## International (USA)

- 2020 Olympic Gold Medalist (3x3)
- 2018 & 2022 FIBA World Cup gold medalist (5x5)
- 2015 Pan American Games silver medalist (5x5)
- 2013 FIBA U19 World Cup gold medalist (5x5)

## **Collegiate Career**

- Unanimous 2017 National Player of the Year
- Two-time All-American
- NCAA career (3,257) and single-season (1,109) scoring leader; broke 33-year-old NCAA career free throw record with 912

## 2023 (Las Vegas)

Named as an All-Star for the second time in her career... Scored a franchise-high 40 points at Minnesota on July 9 and got her first points-assists double-double of the year with 19 points and 10 assists vs. Washington on Aug. 11 ... Prior to the May 25 game in LA, made at least 1 3-pointer in 45-straight regular season games, which was tied for the third-longest streak in WNBA history ... missed the July 5 game vs. Dallas (back)

## 2022 (Las Vegas)

 Leading All-Star vote-getter among guards ... Tied a WNBA record by making at least 3 three-pointers in 9 straight games (Diana Taurasi)

## 2021 (Las Vegas)

 Missed 6 games in May/June while training with the USA 3x3 team.

## 2020 (Las Vegas)

• Did Not Play-Injured (left Achilles)

## 2018 (Las Vegas)

 Recorded her first career double-double with 20 points and a career-high 13 assists at Atlanta Aug. 7

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | RPG                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 59                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 95                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 2.8                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 66                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 96                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 87                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 151                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 479 ## **KIAH STOKES**

#41

Center 6-3 Connecticut '15 8th Yea

## **WNBA Career**

- · 2022 WNBA Champion
- 2015 WNBA All-Defensive 2nd Team
- 2015 All-Rookie Team

## **Collegiate Career**

- 3-time National Champion
- 2015 Conference Defensive Player of the Year

## 2023 (Las Vegas)

 Hauled in a career-high-tying 17 rebounds at Chicago on July 25.

## 2022 (Las Vegas)

 Missed first 4 games of year (overseas) ... Led or tied for team lead in rebounds 3 times

## 2021 (Las Vegas)

Signed on July 2 ... DNP on July 2 ... Averaged
 9.0 rpg. in 8 starts ... Led or tied for the team lead in rebounding 3 times and in assists 1 time

2021 (New York) ...

2020 (New York) ...

2019 (New York)

• Did Not Play (personal reasons)

2018 (New York) ...

2017 (New York)

 Led the team in blocked shots and ranked second in rebounding

## 2016 (New York)

 Missed the final 7 games of the regular season with a hip injury ... Set a WNBA record for highest rebound aveage by a player who didn't start a game

## 2015 (New York) ...

## **Collegiate Honors & Notes (Connecticut)**

 Set a UConn single-season blocked shots record (147) as a senior and capped her career ranked No. 3 among all-time UConn blocks leaders (325).

#### Personal

 Father Greg was an All-American basketball player at lowa who played for the Philadelphia 76ers and won gold with the 1983 USA Pan American Games Team ... Majored in psychology

## **RIQUNA WILLIAMS**

**#2** 

Guard 5-7 Miami '11 11th Year

## **WNBA Career**

- 2022 WNBA Champion
- · 2015 WNBA All-Star
- 2013 WNBA Sixth Woman of the Year
- 2012 WNBA All-Rookie Team

## **Collegiate Career**

- 2-time All-American
- 3-time All-ACC

## 2023 (Las Vegas)

· Has yet to play (back)

## 2022 (Las Vegas)

 Played in just 2 of the team's first 17 games due to a foot injury ...

## 2021 (Las Vegas)

 Led or tied for the team lead in assists on 2 occasions, in scoring 3 times, and in rebounding 1 time

2020 (Los Angeles) ...

2019 (Los Angeles) ...

2018 (Los Angeles) ...

2017 (Los Angeles) ...

## 2016 (Los Angeles)

 Sat out season rehabbing ruptured left Achilles tendon, suffered overseas

## 2015 (Tulsa)

 Ranked 3rd in the W in made 3-pointers, and tied for 4th in made free throws ... Scored a season-high 35 points on 2 occasions—vs. Minnesota on August 1 and vs. Atlanta on August 9

### 2014 (Tulsa)

· Missed 23 games with a knee injury

## 2013 (Tulsa)

 Set what was then the WNBA record for points in a game when she poured in 51 vs. San Antonio on September 8 (17-27 FGs, 8-14 3Gs, 9-9 FTs) ... Tied what was then the WNBA record for made 3s in a game with 8 vs. San Antonio on September 8

## 2012 (Tulsa) ...

## **Collegiate Honors & Notes (Miami)**

 As a junior ranked 11th in the nation in scoring ... As a sophomore led the team and finished 2nd in the ACC in scoring ... Also led the conference in made 3-pointers, setting a school record in the process (second most in ACC history)

## Personal

 Majored in criminology ... Has five siblings—one sister, Rikina Jones and brothers, Ricky Williams, Joshua Jones and Solomon Williams

## **JACKIE YOUNG**

#0

Guard 5-11 Notre Dame '19

5th Year

## **WNBA Career**

- 2022 WNBA Championship
- 2022 WNBA Most Improved Player Award Winner
- 2023 & 2022 WNBA All-Star
- 1-time Western Conference Player of the Week

## International Career (USA)

• 2020 Olympic gold medalist (3x3)

## **Collegiate Career**

- 2019 NCAA Champion
- 2019 ACC Tournament MVP

## **High School Career**

- 2016 Naismith Player of the Year
- · 2016 Indiana's Miss Basketball

## 2023 (Las Vegas)

 All-Star Game starter...Scored a career-high 30 points (12-18 FGs, 4-7 3pt FGs, 2-4 FTs) at Los Angeles on May 25...

## 2022 (Las Vegas)

 Named Western Conference Player of the Week for May 16-22 ... Injured her ankle early in the 4th Q vs. CT on 6/2 ... DNP 6/5 and 6/11 (right ankle sprain) ... Named to her first All-Star Team as a starter (2nd leading vote-getter among guards)
